Profile

Front-End Web Developer with an educational background in both Cultural Anthropology and International Studies from Portland State University, looking to bring my unique skill-set to the web development field. Currently earning my certificate in Full Stack Development from UCSD and possess the skills of Javascript, CSS, JQuery, Node.JS, and responsive web design. Past and present projects I have worked on focus heavily on simplicity, clean design, and ease in website functionality. Website aesthetics are very important to me, as this is the first thing the user sees when they land on a given page. With this comes my dedication to ensuring every application I create has a fully responsive design. I possess extensive group project work experience gained through my studies at UCSD, most notable was a National Park Trip Planner project which was a fully responsive app that rendered National Park information, current events at these locations, as well as weather forecasts of the region via the use of third-party APIs. I'm eager to begin my career in this field, share my skills with a team and build web-based applications that create memorable experiences for the user.

Experience

UCSD, San Diego, California — 2019-Present

Currently completing full-stack development course at UCSD.
